INSTRUCTION MANUAL

CONTROLS

- OUT LED (yellow)**
The yellow LED ON indicates the activation of the output.
- OUT LED (yellow)**
The yellow LED ON indicates the activation of the output.
- POWER ON/ALARM LED (green)**
The green LED blinking indicates received signal absence or distance target outside the measurement range.
The green LED on indicates the power of the sensor.
- OUT PUSH-BUTTON**
The teach-in procedure of the digital threshold of the output is activated by pressing the push-button.
- OUT PUSH-BUTTON**
The teach-in procedure of the digital threshold of the output is activated by pressing the push-button.

See the "THRESHOLD SETTING" paragraph for digital threshold teach-in procedure

INSTALLATION

The sensor can be positioned using threaded M5 holes with max. 6 mm depth.
Do not apply excessive torque when adjusting (max 2.2 Nm).

The operating distance is measured starting from the front surface of the sensor optics.

THRESHOLD SETTING

The sensor uses the patent-covered EASY TOUCH™ technology that allows a rapid and safe self-setting of the product.

EASY TOUCH™

Place the background or the object to be suppressed inside the operating range.

Press the OUT push-button until the OUT LED is OFF.
The sensor is now ready to detect all objects in the operating field distinguishing them from the suppressed background (OUT LED turns ON). Repeat, if necessary, the same procedure for output.

Both digital outputs switch in light mode: when the target detected is inside the acquired threshold, the related output is high.

Viceversa the output is low when the target detected is outside the threshold.

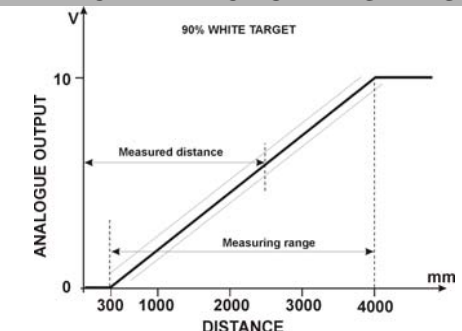

Switching thresholds are set by factory at value 3700 mm.

Both digital outputs switch in the light mode.

When the target is inside the detection threshold the corresponding output is at 24 V. Viceversa, if the measured target is outside the detection threshold, the corresponding output is at 24 V.

The switching thresholds are set by default at 3700 mm.

SAFETY WARNINGS

All the safety electrical and mechanical regulations and laws have to be respected during sensor functioning.
The sensor has to be protected against mechanical damages. The sensor has to be protected against mechanical damages.
Place the given labels in a visible position close to the laser emission.

Do not look directly into the laser beam!
Do not point the laser beam towards people!
Eye irradiation for over 0.25 seconds is dangerous; refer to class 2 standard (EN60825-1). These sensors are not conform to safety applications!

The sensors are NOT safety devices, and so MUST NOT be used in the safety control of the machines where installed.
