

Label software cablabel
**The professional way
to create labels**

The software for creating labels especially for cab printers

Powerful functions enable the creation and printing of even a complex label within minutes.

Take advantage of using the multiple possibilities of cablabel for including simple texts, barcodes, graphics and databases. cablabel is very flexible - and all this in 21 languages.

MDI (Multiple Document Interface) helps to open and handle several labels at the same time. Objects may be copied, moved and inserted into another label.

cablabel has its own drivers which individually respond to all different functions of the cab printers. This most effective communication between software and printer enables to achieve the best possible results.

cablabel Advanced

The starter version for creating labels with text, barcode and graphic fields.

cablabel Professional

Professional handling is supported by including databases into the label. There is an interactive assistant that supports the creating of an UCC/EAN 128 barcode.

cablabel Expert

Additional functions help to create complex labels easily and quickly. Extra features such as user and print manager as well as ActiveX interface and HTML form generator offer the possibility to adapt cablabel to any special needs.
