CONTROLS

OUTPUT LED (S51-...A00/B01/C01/C10/C20/F00)

The yellow LED ON indicates that the NO output status is closed.

POWER ON LED (\$51-...G00)

The green LED indicates that the sensor is operating.

TRIMMER (S51-...B01/C01)

The trimmer can be used to adjust sensitivity; the operating distance increases turning the trimmer clockwise.

WARNING: The trimmer rotation is limited to 270°.

Do not apply excessive torque beyond the maximum and minimum positions (max 40 Nmm).

INSTALLATION

The sensor can be fixed by means of the M18x1 threaded body through a \varnothing 18 mm hole, using the two CH.24 nuts enclosed (22 Nm maximum tightening torque).

Various orientable fixing brackets are available to ease the sensor positioning (please refer to the accessories listed in the general catalogue).

The operating distance is measured from the front surface of the sensor lens.

<u>C models</u>: To improve the detection, the object has to be moved closer or further away from the front surface of the sensor lens.

In case of lateral translation, the object must move as indicated in the figure.

CONNECTIONS

The connections are compliant to the EN 60947-5-2 standard.

SETTING

Setting of S51-...A00/B01

Position the sensor and reflector on opposite sides.

Moving the sensor both vertically and horizontally, determine the power on and off points of the yellow LED (OUT) and then mount the sensor in the middle of the points defined

B01 Model: Turn the sensitivity trimmer to the maximum position.

If necessary reduce sensitivity in order to detect very small targets. In order to improve alignment, repeat the procedure detailed above whilst progressively reducing the sensitivity.

Setting of S51-...F00/G00

Position the sensors on opposite sides.

Move the sensor both vertically and horizontally, determine the power on and off points of the yellow LED (OUT) and then mount the sensor in the middle of the defined points.

Setting of S51-...C01

Turn the sensitivity trimmer to minimum: the yellow LED is OFF.

Position the target to detect in front of the sensor.

Turn the sensitivity trimmer clockwise until the yellow

LED turns ON (Target detected state, pos.A).
Remove the target, the yellow LED turns OFF.

Remove the target, the yellow LED turns OFF.

Turn the sensitivity trimmer clockwise until the yellow LED turns ON
(Background detected state, pos. B).

The trimmer reaches the maximum level if the background is not detected.

Turn the trimmer to the intermediate C position, between the two A and B positions.

Setting of S51-...C10/C20

The operating distance range of these sensors is factory preset: please consider this feature when positioning.

TEST FUNCTION (S51-...G00)

The TEST+ and TEST- inputs can be used to inhibit the emitter and verify that the system is correctly operating.

The receiver output should switch when the test is activated while the beam is uninterrupted. The inputs activating voltage range is 10 ... 30 Vdc, whilst respecting the polarity.

The emission is switched off connecting TEST+ to Vdc and TEST- to 0V.

Do not apply excessive torque beyond the maximum and minimum positions (max 40 Nmm).

INSTALLATION

The sensor can be fixed by means of the M18x1 threaded body through a Ø 18mm hole, using the specific washer and the two CH.24 nuts (1.5Nm maximum tightening torque) or CH.22 nuts, h=8mm, (2Nm maximum tightening torque) enclosed. Alternatively, the sensor can be mounted through the two housing's holes using two screws (M3x22 or longer) and washer.

Amongst the various possible solutions, we suggest to choose the combination that offers the best visibility of the signalling LEDs and the easiest access to the trimmer.

Various orientable fixing brackets are available to ease the sensor positioning (please refer to the accessories listed in the general catalogue). The operating distance is measured from the front surface of the sensor
