

S18/S18M SERIES INSTRUCTION MANUAL

CONTROLS

OUTPUT LED The yellow LED indicates the output status.

TRIMMER (S18/S18M-5-x-B/C)

The trimmer can be used to adjust sensitivity; the operating distance increases turning the trimmer clockwise.

WARNING: The trimmer rotation is limited to 270° by a mechanical stop. Do not apply excessive torque when adjusting (max 40 Nmm).

POWER ON LED (S18/S18M-5-x-G) The green LED indicates that the sensor is operating.

CONNECTIONS

S18-5-x (4 wires)

S18-5-G (4 wires)

SETTING

The following procedures are valid for LIGHT mode operation.

Alignment S18/S18M-5-A/B

Position the sensor and reflector on opposite sides. Find the points where the yellow LED (OUT) is switched ON and OFF in both vertical and horizontal positions, and fix the sensor in the centre between these points.

<u>B models</u>: Turn the sensitivity trimmer to maximum. If necessary, reduce sensitivity in order to detect very small targets.

In order to improve alignment, repeat the procedure detailed above whilst progressively reducing the sensitivity.

Alignment S18/S18M-5-F/G

Position the sensors on opposite sides.

Find the points where the vellow LED (OUT) is switched ON and OFF in both vertical and horizontal positions, and fix the sensor in the centre between these points.

Alignment S18/S18M-5-C

в

68

42

6

42

3

Position the sensor and turn the sensitivity trimmer at minimum: the yellow LED is OFF.

Place the target opposite the sensor. Turn the sensitivity trimmer clockwise until the yellow LED turns ON (*Target detected state*, pos.A).

Remove the target, the yellow LED turns OFF. Turn the trimmer clockwise until the yellow LED turns ON (Background

detected state, pos.B). The trimmer reaches maximum if the background is not detected. Turn the trimmer to the intermediate position C, between the two positions A and B.

Alignment S18-5-K

The operating distance range of these sensors is factory preset: please consider this feature when positioning.

TEST FUNCTION (S18/S18M-5-G)

The TEST+ and TEST- inputs can be used to inhibit the emitter and verify that the system is correctly operating.

The receiver output should switch when the test is activated while the beam is uninterrupted.

The inputs activating voltage range is 10 ... 30 Vdc, whilst respecting the polarity.

DECLARATION OF CONFORMITY

We DATASENSOR S.p.A. declare under our sole responsibility that these products are conform to the 89/336 CEE, 73/23 CEE Directives and successive amendments.

WARRANTY

DATASENSOR S.p.A. warrants its products to be free from defects. DATASENSOR S.p.A. will repair or replace, free of charge, any product found to be defective during the warranty period of 36 months from the manufacturing date.

This warranty does not cover damage or liability deriving from the improper application of DATASENSOR products.

DATASENSOR S.p.A. Via Lavino 265 40050 Monte S. Pietro - Bologna - Italy Tel: +39 051 6765611 Fax: +39 051 6759324 http://www.datasensor.com e-mail: info@datasensor.com

DATASENSOR S.p.A. cares for the environment: 100% recycled paper.

DATASENSOR S.p.A. reserves the right to make modifications and improvements without prior notification.
