

Power supply systems

PROTECT A.

Uninterruptible security for PCs, workstations and telephone systems.

Optimally protect your system against loss of data where it matters with an uninterruptible power supply. Thanks to its wide power range of 500 VA to 1400 VA the PROTECT A. series offers effective and economical data protection during power failure, dangerous power surges and voltage fluctuations.

PROTECT A. proves itself in critical situations with its high availability due to a sturdy overload and excess voltage protection as well as a wide voltage range.

Easy handling: A clear "One-Board-Design" as well as front LEDs clearly inform about the most important aspects of the operating status. The easy handling is complemented by an acoustic alarm, an automatic 50 / 60 Hz recognition and last but not least it can be used immediately as a result of the cable set supplied.

USB and **RS232** connection

for easy control: All functions are microprocessor controlled, permanently monitored and are available as measurements and messages – because PROTECT A. can communicate via a RS232 respectively USB connection with a PC or Mac. In connection with the special shutdown software the most important operating systems can be automatically powered down in the case of a longer power failure.

Protection against power failure and voltage fluctuations:

- Modern VI (line-interactive) technology against power failure and dangerous excess voltage
- Automatic voltage pre-regulation against voltage fluctuation (AVR)
- Double network filter against power surges
- Simple installation with the cables supplied and optimal operation
- Hot-swappable battery design
- USB-connection and RS232 interface
- Data line protection for phone, fax and modem
- 24 months warranty with replacement service
